                                                                                                                                                                SUBCELLULAR LOCATION: Cytoplasmic.
TISSUE SPECIFICITY: Detected in adult peripheral blood leukocytes, thymus, spleen and liver. Also found in promyelocytic leukemia HL-60 cells, chronic myelogenous leukemia K562 cells, Burkitt's lymphoma Raji cells and colorectal adenocarcinoma SW480 cells. Not detected in HeLa SI, Molt 4, A449 and G431 cells. Burkitt's Cortains: Contains I PDZ/DHR DOMAIN.
SIMILARITY: CONTAINS I DDZ/DHR DOMAIN.
SIMILARITY: CONTAINS I G18NNYLATE KINNSE-LIKE DOMAIN.
CAUTION: Supposed to contain a SH3 domain which is not detected by PROSITE, Pfam or SMART.

They both participate in a complex with MALTI, where MALTI binds to BellO (By similarity).

SUBCELLULAR LOCATION: Cytoplasmic (By similarity).

TISSUE SPECIFICITY: Detected in adult heart, kidney and liver; lower levels in intestine, placenta, muscle and lung. Also found in fetal lung, liver and kidney.

SIMILARITY: CONTAINS I CARD DOMAIN.

CAUTION: Supposed to contain a SH3, a PDZ and a guanylate kinase-like domain. But none of these 3 domains are detected by PROSITE,

CARD9 is a novel caspase recruitment domain-containing protein that
interacts with Bcl10/CLAP and activates NF-kappa B.";
J. Biol. Chem. 275-141082-41086(2000).
-!- FUNCTION: Activates NF-kappa via Bcl10 (By similarity).
-!- SUBUNIT: Self-associates. CARD9 and Bcl10 bind to each other by
CARD-CARD interaction (By similarity).
-!- SUBCELULLAR LOCATION: Cytoplasmic (By similarity).
-!- SIMILARITY: CONTAINS 1 CARD DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                  Gaps

SUBUNIT: Self-associates by CARD-CARD interaction and interacts with other CARD-proteins such as CARD9, CARD10, CARD11 and CARD14.
Binds caspase-9 with its C-terminal domain (By similarity).
Interacts with TRAF2 and BIRC2/c-IAP2.

                                                                                                      Strausberg R.; Submitted (MAR-2002) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Promotes apoptosis, pro-caspase-9 maturation and activation of NF-KappaB via NIK and IKK. May be an adapter protein between upstream TNFR1-TRADD-RIP complex and the downstream NIK-
                                                                                                                                                                   INK-IKAP complex (By similarity).
SUBUNIT: Self-associates by CARD-CARD interaction and interacts with other CARD-proteins such as CARD9, CARD10, CARD11 and CARD14.
Binds caspase-9 with its C-terminal domain. Interacts with TRAF2 and BIRC2/c-IAP2 (By similarity).
SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
INTSSUE SPECIFICITY: Highly expressed in heart, brain, spleen, lung, liver, skeletal muscle, kidney and testis. Detected in developing brain, olfactory epithelium, tongue, whisker follicles, sallyary gland, heart, lung, liver and intestinal epithelia of stage 15 embryos.
PTM: Phosphorylated (By similarity).

                                                                                 The present sequence is human caspase recruitment domain-14 (CARD-14). The CARD-14 gene is located on chromosome 17. The CARD-14 is used for the detection of modulators that modulates the ability of CARD-14 to bind to Bol-10 and stimulates phosphorylation of Bol-10 or activation of nuclear factor-kappa B (NF-kB). The CARD-14 is useful for regulating growth and cell death and useful for the treatment of cancer. It is also useful for the treatment of autoimmune disorders (e.g., systemic lupus erythematosus), neurological disorders e.g., Alzheimer's and Parkinson's disease, inflammatory disorders e.g., haematological disorders (e.g., anaemia, myelodysplastic syndromes), myocardial infarctions, strokes, immune disorders (e.g., Crohn's disease, allergic rhinitis), cell signalling disorders and certain viral and bacterial infactions.

(CARD-14). The CARD-14 gene is located on chromosome 17. The CARD-14 is used for the detection of modulators that modulates the ability of CARD-14 to bind to Bcl-10 and stimulates phosphorylation of Bcl-10 or activation of nuclear factor-kappa B (NF kB). The CARD-14 is useful for regulating growth and cell death and useful for the treatment of cancer. It is also useful for the treatment of autoimmune disorders (e.g., systemic lupus erythematosus), neurological disorders e.g., Alzheimer's and Parkinson's disease, inflammatory disorders, haematological disorders strokes, immune disorders (e.g., annume disorders (e.g., crohn's disease, allergic rhinitis), cell signalling disorders and certain viral and bacterial infections.
                                                                                                                                                                    An isolated caspase recruitment domain polypeptide useful for regulating growth and cell death and useful for the treatment of cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 387

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Domain
 The present sequence represents novel numan caspase recruitment domain, CARD-11. The polyvuclectide encoding this sequence was isolated from a human T-cell cDNA library, Also described are covel human sequences for CARD-9 and CARD-10 (AAU01205). AAU01206)

and rat CARD-9 (AAU01204). CARD-9, CARD-11 interact and appotosis: The sequences of the invention can be used for treating a disorder associated with abnormal levels of apoptosis by creating the expression or activity of CARD-9, CARD-10, or CARD-11. CR They can be used for the treatment of hyperproliferative disorders (e.g. cancer), autoimmune disorders (e.g. systemic lupus erythematosus), neurological disorders (e.g. Alzheimer's disease), inflammatory disorders (c.g. cancer), advisorders (e.g. systemic lupus erythematosus), neurological disorders (e.g. Alzheimer's disease), inflammatory disorders (c.g. cancer), advisorders (e.g. disease), inflammatory disorders (c.g. cancer) and viral infection (e.g. HTV). The CARD can be used in screening and detection assays (e.g. chromosomal campping, tissue typing), predictive medicine (prognostic assays, monitoring clinical trials, and therapy (treatment and prophylaxis). The CARD polypeptide may be used to screen for drugs that bind to and/or cancer, modulate it. CARD sequences are potential targets for regulating inflammation, cancer, NF-kappaB signalling, stress-related response and apoptosis in human disease. A host call containing a polynucleotide capprocess are potential armagenic animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ;

```
The present sequence represents novel human caspase recruitment domain, CARD-10. The polynucleotide encoding this sequence was isolated domain, CARD-10. The polynucleotide encoding this sequence was isolated from a human skin CDNA library. Also described are novel human sequences for from a human skin CDNA-11 (AAU01205, AAU01207) and rat CARD-9 (AAU01204). CARD-9, CARD-10 and CARD-11 interact with Bcl-10 which is thought to activate nuclear factor (NF)-kappab and apoptosis. The sequences of the invention can be used for treating a disorder sescited with abnormal levels of apoptosis by modulating the expression or activity of CARD-9, CARD-10, or CARD-11. They can be used for the treatment of hyperproliferative disorders (e.g. cancer), autoimmune disorders (e.g. CARD-10, or CARD-11. They can be used for the treatment of sorders (e.g. cancer), autoimmune disorders (e.g. Alzheimer's disease), inflammatory disorders (e.g. Crohn's disease), and viral infection (e.g. HIV). The CARD polypeptide, polynucleotide and an antibody which selectively binds to CARD can be used in screening and detection assays (e.g. chromosomal mapping, tissue typing), concreen for drugs that bind to and/or modulate it. CARD sequences are potential targets for requilating inflammation, cancer, NF-kappab signalling, stress-related response and apoptosis in human disease. A host cell containing a polynucleotide encoding CARD can be used to create transgenic animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to an isolated plakoglobin interacting polypeptide (I). (I) is useful as a medicament and in the manufacture of a medicament for treating plakoglobin related diseases, such as skin carcinoma or an acantholytic disease, and to screen compounds that interfere with the interaction of the polypeptide with plakoglobin related diseases, include basal cell carcinoma, extranammary Paget's disease, Naxos disease, heart diseases, skin blistering and acantholytic diseases such as subcorneal acantholysis, Grover's disease, Hailey's disease or Darier's disease, and ectodermal dysplasia/skin fragility syndrome. AAU73245-AAU7324 represent novel human plakoglobin interacting protein amino acid sequences and related sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            LMTEVRILREARKSQLQREQQLQARGRVLEEERAGLEQRIRDQQQAQERCQRLREDWEAG 195
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       FHEVLRLKDEMLSLSLHYSNALQEKELAASRCRSLQEELYLLKQELQRANMVSSCELELQ 122

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence represents novel rat caspase recruitment domain, CARD-9. The polynuclectide encoding this sequence was isolated from a rat neuronal cDNA library. Also described are novel human sequences for CARD-10 and CARD-11 (AAU01205).

CARD-9, CARD-10 and CARD-11 interact with Bcl-10 which is thought to activate nuclear factor (NF)-Kappas and apoptosis. The sequences of the invention can be used for treating a disorder associated with abnormal levels of apoptosis by modulating the expression of the invention can be used for treatment of hyperproliferative disorders (e.g. cractivity of CARD-19, CARD-10, or CARD-11. They can be used for activity of CARD-9, CARD-10, or CARD-11. They can be used for autoimmune disorders (e.g. systemic lupus erythematosus), neurological disorders (e.g. Alzheimer's disease), inflammatory disorders (e.g. planier's disease), and wiral infection (e.g. HIV). The CARD polypeptide, polynuclectide and an antibody which selectively binds to CARD can be used in screening and detection assays (e.g. chromosomal mapping, tissue trials, and therapy (treatment and prophylaxis). The CARD polypeptide may be used to screen for drugs that bind to and/or modulate it. CARD
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    8;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel caspase recruitment domain (CARD) proteins, CARD-9, CARD-10, CARD-11, useful as targets for therapy, as immunogens, and in screening and detection assays -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     EQ-SLRTASDQESGDEELNRLKEENE----KLRSLTFSLAEK------DILEQSLDE 168

The presult sequence represents movel immunicated was isolated from a human megakaryocyte cDNA library. Also described are novel human sequence for CARD-10 and CARD-11 (AAU01207) and rat CARD-9 sequences for CARD-10 and CARD-11 interact with Bcl-10 which is sequences for CARD-10 and CARD-11 interact with Bcl-10 which is thought to activate nuclear factor (NF)-kappaB and apoptosis. The sequences of the invention can be used for treating a disorder associated with abnormal levels of apoptosis by modulating the expression or activity of CARD-9, CARD-10, or CARD-11. They can associated with abnormal levels of apoptosis by modulating the expression or activity of CARD-9, CARD-10, or CARD-11. They can cerv. activity of CARD-9, CARD-10, or CARD-11. They can cerv. activity of CARD-9, CARD-10, or CARD-11. They can cerv. activity of CARD-9, CARD-10, or CARD-11. They can cerv. activity of CARD-9, CARD-10, or CARD-11. They can cerv. activity of CARD-10, are activity of CARD-10, and the disease, infinamatory disorders (e.g. Alzhelmer's disease), infinamatory disorders (e.g. Alzhelmer's disease), infinamatory disorders (e.g. CARD can be used in screening and detection assays (e.g. chromosomal mapping), tissue typing), predictive medicine (prognostic assays).

CARD polypeptide may be used to screen for drugs that bind to and/or monitoring clinical trials, and therapy (treatment and prophylaxis). The CARD sequences are potential targets for regulating and inflammation, cancer, MorkappaB signalling, stress-related response and appetosis in human disease. A host call containing a polynucleotide encoding CARD can be used to create transgenic animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel caspase recruitment domain (CARD) proteins, CARD-9, CARD-10, CARD-11, useful as targets for therapy, as immunogens, and in screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence represents novel human caspase recruitment

The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  830 Primers useful for synthesizing full length cDNA clones and their

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a
without any special methods. The present sequence is a polypeptide encoded by a full length human cDNA of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EPO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the

9
polynucleotide which comprises a 3'-end sequence, where the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs as illy without any specialised methods. AAH03166 to AAH13628 and AAH13613 to AAH13612 to AAH13612 end and coid sequences; and AAH13612 to AAH13612 represent human anino acid sequences; and AAH13612 to AAH13612 represent oligonucleotides, all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      EQ-SLRTASDQESGDEELNRLKEE----NEKLRSLTFSLAEK------DILEQSLDE 168

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               δy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   g
                                                                                                                                                                                     polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymerase chain reaction (PCR) primers, oligomers, and for chromosome polymerase are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynuclectide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010 ABG30377 represent novel human amino acid sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                14;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence. The complementary to a polynucleotide which comprises a 3'-end sequence, and an oligonucleotide comprises at 3'-end sequence, where the oligonucleotide which comprises as 1'-end sequence, where the oligonucleotide comprises at 15 nucleotides and the combination of the 5'-end sequence, and sequence; selected from those defined in the specification. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the proteins encoded by the full-length cDNAs. The primers also useful for the full-length cDNAs. The primers also useful for the full-length cDNAs. The primers also useful for AMH13628 and AMH13613 to AMH13613 to AMH13631 Lepresent human amino acid sequences; and AMH13629 to AMH13632 represent human amino acid sequences; and AMH13632 to AMH13632 represent human amino acid sequences; and AMH13632 to AMH13632 represent human amino acid sequences; and AMH13632 to AMH13632 represent human amino acid sequences; and AMH13632 to AMH13632 companion and AMH13632 and AMH13633 companion and AMH13632 and AMH13633 companion and AMH13633 companion amino acid sequences; and AMH13632 to AMH13632 companion and AMH13632 companion and AMH13632 companion and AMH13633 compani
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        12;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  MIT and MT2 proteins were islated from malignant cells essentially following the method of Penman and Fey, described in US Pat. Nos. 4, 882,286 and 4,885,236. DNA sequences encoding these proteins were cloned by probing expression libraries using monoclonal antibodies raised against the isolated INM proteins. The genetic sequence encoding MT2 has been disclosed by Yang et al. 1992, J. Cell Biol. 116:1395-1408, and is referred to by them as 'NuMA'. The nucleotide sequence encoding MT1 has not beed described previously. Both the MT1 and MT2 proteins are distributed throughout the nucleus (with the expinole during mitosis. A binding protein having a binding affinity of greater than about 10(9) M(-1) for AAR47173 is claimed for use in the manufacture of a medicament.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             471
